

Quick suctioning immersion pumps

Quick suctioning immersion pumps equipped with the patented “BRINKMANN’s Suction De-aeration System” are excellently suited to pumping extremely inflated fluids (emulsions resp. cooling/cutting oils) as they occur in heavy cutting when turning, milling or grinding. The quick suctioning immersion pumps reach stable working conditions as soon as the liquid level reaches the suction inlet.

Single stage pumps are available (upon request) with an additional agitator at the pump suction for breaking up and separating large bundles of chips and grinding sponges.
